Abstract

Born Ronald Erwin McNair on October 21, 1950 in Lake City, South Carolina. In 1971, he received a bachelor of science in Physics from North Carolina A&T State University. He received a doctor of philosophy in Physics from Massachusetts Institute of Technology in 1976. He was presented with an honorary doctorate of Laws from NC A&T State University in 1978 and an honorary doctorate of Science from Morris College in 1980. He flew on a Challenger mission in February 1984. He died January 28, 1986, one of the astronauts in the Challenger disaster.

The collection contains newspaper articles, recognition programs and other papers relevant to his life, both shuttle flights, and the years following the Challenger disaster in 1986.

Biographical Note

Dr. Ronald E. McNair (1950-1986) was a native of Lake City, South Carolina. He attended North Carolina A&T State University and earned a degree in physics in 1971. He majored in music for a week before deciding to pursue his degree in physics. He obtained his Ph.D in laser physics from the Massachusetts Institute of Technology (MIT) in 1976 and began a career as a research scientist. Dr. McNair applied for and was selected as an astronaut candidate by NASA in January 1978. He maintained a relationship with A&T, visiting and giving speeches inspiring future generations to pursue careers in the sciences.

On February 3, 1984, Dr. McNair made his first trip into space as a mission specialist on the space shuttle Challenger. He was the second African-American to go to space.

On January 28, 1986, he was on board the Challenger for his second trip when the space shuttle disintegrated just over a minute into its flight. Also lost were Ellison Onizuka, school teacher Christa McAuliffe, Gregory Jarvis, Judith Resnik, Michael J. Smith, and Francis "Dick" Scobee. Smith was a native of Beaufort, North Carolina.

McNair was also an accomplished jazz saxophonist and taught karate in which he held a black belt. Before his last mission he had worked with composer Jean Michael Jarre on a piece of music. It had been intended that McNair would record his saxophone solo on board the shuttle which would have been the first original music recorded in space. The piece now has the name of "Ron's piece".

He was married to Cheryl Moore and had two children, Reginald and Joy.

In 1987, the newly built engineering building at A&T University was dedicated and named Ronald E. McNair Hall. MIT named the building for astrophysics and space research after McNair. The U.S. Department of Education offers the Ronald E. McNair Post-Baccalaureate Achievement Program for students with low income, first generation students, and/or under represented students in graduate education for doctorate education.
